AIR Journals Paper Template | General remark: everything is (left-aligned) + (font is Times New Roman 12pt) + (single line spacing) + (0 paragraph spacing) > we care about research quality; hence formatting is extra-easy. See published papers for acceptable formats; your research what matters.

Paper Title (Any acceptable title case; e.g. AMA, APA, Bluebook…etc): Replace this text with your complete paper title

Author Name[1*], **Author Name**[2], **Author Name**[1]
[1] Department of Computer Science, University of Example, Country
[2] School of Engineering, Institute of Technology, Country
[*] Corresponding author: *email@example.edu*

Author Name
Department of Computer Science, University of Example, Country, *email@example.edu*

If there are multiple authors

If there is one single author

[If multiple authors: list them as seen above with their affiliations. Indicate corresponding author with asterisk (*)]
[If multiple authors exist and all of them have the same affiliation; then one line for that affiliation and no need to superscript numbers]
[If one single author: list the name on first line, while the affiliation and email address on second line.]

Abstract

Your abstract text here. The abstract should be 150-300 words summarizing your research objectives, methods, key findings, and conclusions. Keep it concise and informative. Adjust length to ensure the entire title page (title through keywords) fits on one page; nothing else on this page: Introduction must start on next page (one exception: too many authors on title page(s); hence Introduction starts on subsequent page).

Keywords: keyword 1; keyword 2; keyword 3; keyword 4; keyword 5; keyword 6; keyword 7; keyword 8; keyword 9; keyword 10.

[If there is an online data repository: mention it after Keywords (using its format) and before Introduction]

1. Introduction

Introduction text here. Begin your introduction here. Provide background, context, research problem, objectives, and significance of your study. Use subsections if needed (1.1, 1.2, etc.).

1.1 Research Problem

Subsection text here...

2. Methodology / Theoretical Framework / Literature Review

For empirical papers: describe your data collection, methods, and analytical procedures. For theoretical papers: present your theoretical framework or conduct your literature review. Use subsections as appropriate. Use subsections if needed (2.1, 2.2, etc.).

[For papers with equations, insert them where appropriate; embedded, with the flow of text. Each symbol in any equation must be defined once it appears for the first time; no repeated definitions; one empty line before each

© 2025-2026 Artificial Intelligence Review AIR Publishing House LLC (AIR Journals); US-registered Limited Liability Company. All rights reserved.

equation and one empty line after it, unless multiple equations are constituting a paragraph-block. Equations might be numbered on right (not a necessity if in-text referencing isn't needed).]

$$E = mc^2 \qquad (1)$$

E: energy (joules), m: mass (kilograms), c: speed of light in vacuum (approximately 300,000 km/s or 186,000 miles/s).

3. Results / Analysis

Present your findings, results, or analytical arguments here. For empirical papers: present data, statistics, and findings. For theoretical papers: develop your arguments and analysis. Use subsections if needed (3.1, 3.2, etc.).

[Insert figures and tables once they are mentioned in text, embedded, with the flow of text (not at end of paper). Caption goes BELOW the figure (because every single figure must fit in one single page), and Caption goes ABOVE the table (because a table might extend over multiple pages). One empty line before each figure and one empty line after its caption (no empty line between figure and its caption); one empty line before each table's caption and one empty line after each table (no empty line between table and its caption). Everything is left-aligned (figure or table can be big enough to fill page width, like the table below, or can be small like the figure below). Keep in mind best visuality: if it's necessary to have font 11pt or 10pt to provide best visuality of figures or tables, that's fine; this is the only exception of the rule of 12pt font size; everything in every figure and table must be 100% readable; no pixelization is allowed at all.]

Figure 1. Caption describing the figure content

Table 1. Caption describing the table content

Variable	Value 1	Value 2
Data A	100	150
Data B	200	250

4. Discussion / Implications

Interpret your results, discuss implications, compare with existing literature, address limitations, and suggest directions for future research. Use subsections if needed (4.1, 4.2, etc.).

5. Conclusions

Summarize your key findings, contributions, and final thoughts. Use subsections if needed (5.1, 5.2, etc.).

© 2025-2026 Artificial Intelligence Review AIR Publishing House LLC (AIR Journals); US-registered Limited Liability Company. All rights reserved.

6. Acknowledgments

Optional section: if you wish to acknowledge funding sources, collaborators, or any assistance. This is where you mention any conflict of interest clearly.

7. References

[Numbered; starts as continuation after previous section (with Widow/Orphan Control, which is necessary always). List all references here. Use any standard citation format (APA, MLA, Chicago, Vancouver, IEEE, etc.) but maintain consistency throughout. Each reference should be numbered on a new line. No empty lines between references, as seen below]

1. Author, A. A., & Author, B. B. (2023). Title of article. Journal Name, 11(2), 123-145. https://doi.org/xxx
2. Author, C. C. (2022). Title of article. Journal Name, 3(7), 23-45. https://doi.org/xxx

General: [LINE NUMBERS: After opening this template in Microsoft Word, enable line numbers by going to: Layout → Line Numbers → Continuous. This will add line numbers to every line (we will delete them in final published paper). There must be a line number on the left of every single line in any version submitted for review, except the special cases of figures and tables, as seen above.]

General: [Widow/Orphan Control: Always; no header or sub-header at end of any page unless minimum of one line of text follows on same page. You are advised not to ever have two consecutive empty lines, as the line numbers will reveal them if you don't suppress that; instead, highlight the lines you want, right-click on them then click on "Paragraph", then click on "Line and Page Breaks", then select appropriate "Pagination" options.]
